Apple Core Slicer, Peeler, Cutter Machine

Introduction

The Apple Peeler, Coreer, and Slicer is an automated machine designed specifically for fruit and vegetable processing, capable of peeling, cored, sliced, and sliced apples, pears, oranges, persimmons, and other fruits in one go. Its flexible design offers two, four, or six station options, adapting to production scale and meeting the needs of both small workshops and large processing plants. The machine measures 3200 x 1400 x 1600 mm, has a total power of 2.2 kW, and operates on 220V, achieving an output of up to 3,000 apples per hour. Constructed of premium SUS304 stainless steel, the motor and reducer are carbon steel, the belt is made of white PVC, and the base and standard components are also constructed of 304 stainless steel, ensuring both durability and hygienic standards while ensuring stable operation.

Automated Apple Processing Workflow

The operator places the apple on the machine's fruit tray, triggering an automatic fixing mechanism. Top and bottom pins secure the apple axially, preventing movement without damaging the flesh—ideal for round fruits like apples and pears.

Next, the machine performs peeling, coring, and slicing in sequence:

Peeling: A rotating circular blade removes the peel with adjustable speed/pressure for minimal flesh loss.

Coring: A cylindrical tool pierces the core, customizable for different fruit sizes.

Slicing/Sectioning: Parallel blades create even slices, or radial blades divide the fruit into segments (e.g., 6 or 8).

The process ensures fast, precise, and damage-free preparation.

Advantages

Efficient and Versatile: Integrating four core functions – peeling, core removal, slicing, and slicing – eliminates the need for manual switching and achieves a maximum output of 3,000 pieces per hour, significantly improving processing efficiency and reducing labor costs.

Flexible Adaptability: Available with 2, 4, or 6 workstations, it can be flexibly adjusted to meet production needs. It also supports functional customization to specifically meet the processing characteristics of different fruit types or special process requirements.

High-Quality Materials: The main body and key components are made of SUS304 stainless steel, offering excellent corrosion resistance and easy cleaning, meeting food processing hygiene standards. The white PVC belt is wear-resistant and unlikely to contaminate food. The carbon steel motor and reducer ensure stable power and long service life.

Easy Operation: Compatible with 220V standard voltage, it requires no special power supply configuration. The user-friendly design makes daily operation and maintenance simple and convenient, ensuring rapid production start-up and stable operation.

Applicable Targets

This machine is suitable for a wide range of common fruit trees, including peaches, apples, pears, and persimmons.

Note: Due to space limitations, the finished product shown in the picture is only one of them. If you need to check whether other raw materials can be used with this machine or other functions, please contact our sales and our

How to pack?

Our packaging machines carefully select custom-made boxes made from high-strength solid wood to ensure packaging stability from the start. This wood undergoes rigorous drying to maintain a reasonable moisture content, effectively preventing deformation and cracking caused by humidity fluctuations. This ensures the boxes maintain structural integrity during long-distance transportation and storage.

What related products are there?

Apples go through a peeling, coring, and slicing machine, which turns them into smooth, evenly split segments that slide onto a conveyor belt. These segments then enter a dryer, where constant hot air removes moisture, shrinking them and giving them a slightly tough texture. The dryer's mesh belt allows hot air circulation and moisture escape, resulting in dry slices with a fruity aroma.

Next, the dried slices move to a packaging machine. Its robotic arm places a set amount into bags. The entire line, from

office from today, any questions or needs about our machine, contact me without any hesitation. Best regards for all of your family. 09:48 ✓

Good morning Susan, nice holiday all the best for you and ur family the Golden Machinery is the best Machines all over the world

Very impressive! Great Quality and Fast ship parts very quick and in great condition. 4 days in Australia, it is a remarkable record. Happy to meet David Gaston

Us: We are brother between Kazakhstan and China 10:33 下午7:33 ✓

I really appreciate you without doing any business you are so good friend 下午7:35

can find the point and open Any questions or help, contact me

yes if we need buy any machine we only choose your machine

My son and his dad 10:44 ✓

I really enjoy with machine 10:44 ✓

回复: Dear David, please be much for your highly feedback
